

Education Gap Assessment for ARTI

Process: The International Arrangement (IA) organizations, in collaboration with International Consultants of Delaware (ICD), participated in an analysis of education and credentialing standards. The IA organizations, via cooperation and collaboration, established minimum educational standards for the IA.

Use: ICD will conduct a credentials evaluation that will assess if an applicant has bridged the identified education gaps through a detailed analysis of academic courses, syllabi, continuing professional education, and other related activities that describe the applicant's cumulative knowledge, abilities, behavior, and expertise.

Summary of Jurisdictional Gaps:

- Gaps may require remediation (to be determined by ARTI).
- Key Decision: Education gaps of a jurisdictional nature or required a specific First Responder Course, were deemed present for all International Arrangement organizations.
- Visit the [ARTI website](#) for more information about how applicants bridge gaps.

Gap	Gap Found in Comparison to:
Practice within the identified ARTI Scope of Practice	BASRaT BOC CATA
Practice within the laws that govern ARTI	BASRaT BOC CATA
The laws, regulations, and procedures that govern storing, transporting, dispensing, and recording prescription and non-prescription medications	BASRaT BOC CATA
Relevant and current Health and Safety legislation & practice.	BASRaT BOC CATA
Basic knowledge of the healthcare system in Ireland and appropriate public health strategies	BASRaT BOC CATA
Maintaining appropriate levels of Personal Indemnity and Malpractice Insurance and understanding how this relates to the limits of practice	BASRaT BOC CATA
The principles and concepts related to the fabrication, modification, and appropriate application or use of orthotics and other dynamic and static splints	CATA
